

Dear Resident,

In 2023, the Village of Morton Grove will continue the Lead Line Identification Program. This program is important to help the Village identify all the lead lines that are currently operating within our water system. **We need your help to identify what material was used for your water service line.**

Please review the information in this letter and contact us at your earliest opportunity. Please disregard this notice if you have already submitted your information or have a pending appointment.

There are three options to provide the water service information. Village staff can enter your home to physically inspect the incoming service line. The process should take less than 5 minutes, but will require access to the basement or the area on the property where the water meter is located. Please call 847-470-5235 to set up an appointment. All staff carry Village ID and will be driving a Village vehicle. Staff will practice social distancing and will be wearing masks.

You can send a photo of your water service connection, along with your address and contact information to LeadLines@mortongroveil.org. Or scan the Code below to complete the Service Line Inventory Survey.

The photo should look like either of the samples pictured below, and must include the incoming pipe from the outside to the water meter. The pictures below showing the entire meter setup is preferred.

If you have further questions about this process or are interested in replacing your lead line, please do not hesitate to contact me directly at 847-663-3912 or send an email to klochner@mortongroveil.org.

Respectfully,

Kevin Lochner
Superintendent Water/Sewer Division
Village of Morton Grove

CC: Joe Dahm, Director of Public Works
